

INNOVATIVE, SUSTAINABLE PACKAGING SOLUTIONS

We provide environment friendly solutions for all manufacturers who care about sustainability and to this end, they are looking for new, green alternatives to replace their currently used, mostly plastic based packaging materials.

We are committed to the acquisition and application of environment friendly technologies, recycling and development of innovative solutions. For several years, we have been experimenting with different raw materials to replace plastic, thus reducing the generation of waste material and the ecological footprint.

The principles and criteria of Lenopack in terms of sustainability is the production of 100% plant- or waste-based compostable biopolymer material and products, to achieve this, we are constantly expanding our product range to offer an alternative to our partners who are interested in sustainability and replacing plastic based materials.

ABOUT US

LenoPack Ltd. is a 100% Hungarian-owned family business, which has been operating in the central location of Dunaújváros, next to the Danube Ironworks. We primarily manufacture plastic products, but right from the start we are open to produce environment friendly products. Thanks to our continuous research, we can offer marketable innovative solutions.

📍 H-2400 Dunaújváros, Gyárkapu út 4.

WHAT WE OFFER

We manufacture injection-molded products and packaging materials from plant-based biopolymers, such as catering trays or cosmetic jars. Our product range is under continuous development, which we are expanding according to the customer's needs.

WHOM WE SERVICE

We recommend our solutions to those companies, that prioritize environmental protection and sustainability, use packaging in the food and/or cosmetics industry and also have a customer base that cares about the environment.

OUR INNOVATION

LenoPack gives extra functionality to the by-product (lignin) generated during paper production, thus increasing means of use and reducing waste generation. Thanks to the plant-based, unique ingredients, these products can be composted and decompose easily, so they can return to the natural cycle once the product has worn out. As a result, our customers receive a plastic-free solution and they also support research and development for market-based sustainability.

If going green is crucial for you and you want to offer sustainable choice to your customers, get to know our products and inquire on the contact details below! Be our partner in sustainable production!
